Product Description

New Holland Powerstar 120 Tractor

FIVE STARS OF UTILITY Five PowerStar™ models pack power to effortlessly tackle your jobs. Along with efficient engines and a 12x12 transmission with a power shuttle, you'll choose between a 2WD or 4WD front axle and an ergonomic cab or ROPS platform. Get the perfect pairing with a factory-installed LU Series loader.

PUTTING THE POWER IN POWERSTAR Power is important for a utility tractor and the PowerStar™ Series delivers, just as its name says. All models feature a 4-cylinder Tier 4B FPT engine. Unlike some competitors, no diesel particulate filter (DPF) is used, and no regeneration is required.

GREEN BELONGS IN YOUR POCKET Common rail fuel injection enhances combustion and reduces fuel consumption. These engines also provide more power, torque, and efficiency compared to previous Tier 4A engines and come with an industry-leading 600-hour service interval for less downtime.

OUR VISION. YOUR VIEW. Inside the VisionView™ cab, the high-visibility panel pairs with the sloped hood and curved loader arms to let you see more of your work. Frequently-used controls are strategically placed on the Command Arc console and a powerful heating and cooling system, tilt steering column, and instructor seat further ensure productivity.
