Product Description

New Holland Hayliner® Small Square Balers

A LEGACY OF INNOVATION The Hayliner® name proudly returns across all models—fusing this legendary name, time-tested performance, and reliability with modern styling. No other brand comes close New Holland for the number of small square balers sold.

SIDE-FILL DESIGN The baler swings out to the right of your tractor, making it easier to see than an inline baler design. This time-tested design also means windrows won't bunch up as they pass underneath a low tractor drawbar or hitch pin.

DEPENDABLE DRIVELINE The Hayliner® Series offers reliable power transfer for robust performance from the Power-Pivot joint that minimizes driveline wear and chatter to the Category 6 driveline, 248 lbs. (112 kg) direct-drive flywheel, and high-capacity hypoid gear drive gearbox.

BIG CAPACITY FOR SMALL BALES The durable rotary feeding system provides smooth and even crop flow, while the powerful plunger runs at 93 strokes per minute to handle big windrows at impressive speeds.
