Product Description

Werk-Brau: Mini Excavator Severe Duty Bucket

Recommended Applications

Werk-Brau's severe duty buckets are specifically designed with an aggressive dig angle to effectively excavate in the toughest conditions. Ideal applications for this bucket include but are not limited to demolition work, shot rock, high abrasive applications, and moderate prying. When paired with a thumb, this bucket can also be used for material handling.

Quality Construction

Increased material thickness in most components add life and durability in the most extreme digging conditions. T-1 steel is utilized in all critical or high wear components. This bucket features tapered side plates, horizontal wear straps, and an extra thick cutting edge is backed by a wear plate that covers the entire bucket bottom. The cutter bit is made from heavy duty cast material. Side wear plates protect the bucket sides in the high wear areas and extend the buckets operation life. The tip radius on the severe duty excavator bucket is to or within O.E.M. specifications. Each bucket is engineered with tapered side plates to reduce wear on the buckets sides, and to allow for easier dumping.

Cutting Equipment Options

Oversized OEM approved cast teeth and shanks are standard.
